

Application rate for drip cleaning

I

Apply 5L / ha for routine cleaning of drippers.

Apply 5L/ha in enough water to fill drip lines. Switch water off and leave overnight. In the morning, open out the ends of the lines, turn the water back on and irrigate as needed to flush the lines.

'Shock' treatment rate of 10L/ha can be applied to more severely blocked dripper or you can do the 5L/ha rate twice.

The major benefits of Mixwell® are that it can be applied whilst crops are actively growing without detrimental effects, it is non corrosive, it is not a DG and is extremely safe to handle despite having a pH of 2.

Once the lines are flushed, you can use Mixwell® at 1L/ha every week or fortnightly to stop the buildup of Calcium deposits in the lines.
