

SOFTA-SOIL

Product Information

GENERAL INFORMATION

SOFTA-SOIL is a specially designed soil conditioner which aids in water penetration, aids in runoff reduction, increases the water holding capacity by the soil particles especially in areas where water is scarce and promotes deeper root systems and increases water-use efficiency. **SOFTA-SOIL** may also increase microbial activity in the soil and is biodegradable and safe for use in the environment.

SOFTA-SOIL is specifically designed to aid soils with a history of poor water penetration, and / or sodium build up. Problem areas of lawns, greens, fairways, sports fields, agricultural fields and greenhouse growing media can be corrected by using **SOFTA-SOIL**.

SOFTA-SOIL increases water penetration by allowing water to better adhere to soil particles which may have become locked together through compaction or poor soil structure. By unlocking these particles, **SOFTA-SOIL** increases water penetration, reduces runoff, increases aeration and allows root systems to move down the soil profile.

SOFTA-SOIL® can be applied to ALL crops including all vegetables, Potatoes, Carrots, Onions, all berries and strawberries, all Brassicas, all fruit trees, Avocados, Persimmons, Citrus, all Nut trees, Vineyards, Kiwifruit, Tropical fruit, Lettuce, Asparagus, all Melons, Beans, Ginger, Ornamentals, Cut flowers and Pastures.

Directions and General Recommendations

SOIL APPLICATION

Apply **SOFTA-SOIL®** at 2.5 – 5 Litres per hectare through drip irrigation very early in the spring. This application should be repeated 3-5 times throughout the season based on the level of compaction and / or crusting of the soil and the sodium levels. Spread the applications out across the season for optimum results.

SOFTA-SOIL can be applied through overhead sprinklers, pivots, drip irrigation and any form of irrigation at any stage of the season. When applying, add **SOFTA-SOIL** halfway through the watering cycle.

SOFTA-SOIL can be used as an excellent wetting agent for growing media, mulch, sawdust, peatmoss and manure.

Using **SOFTA-SOIL** in a maintenance program by applying as little as 1 – 2 Litres per week per Ha will ensure efficient use of both water and fertiliser—saving you time and money. In green houses the application rate is 100-200ml/400sqm every 10-14 days.

FOLIAR APPLICATION

SOFTA-SOIL® is not specifically designed for foliar application as it is most beneficial as a soil conditioner. However, there are no adverse reactions to the application of **SOFTA-SOIL®** as a foliar application and there will be no adverse reaction to **SOFTA-SOIL®** when and if the product comes in contact with plant foliage.

SOFTA-SOIL® helps in leaching out Sodium from the soil profile.

SOFTA-SOIL® is best applied when plants are in an active growing stage. **SOFTA-SOIL®** may be used at any time throughout the season. For best results and more specific recommendations, contact your nearest distributor.

LIMITED WARRANTY

Manufacturer or reseller makes no warranty, whether expressed or implied, concerning the use of this product other than for the purposes indicated on the label. Neither manufacturer nor reseller shall be liable for any injury or damage caused by this product due to misuse, mishandling or any application not specifically described on the label.
